

CovertSwarm

Constant Cyber Attack

Outpace your cyber threats

www.covertswarm.com

About Us —

CovertSwarm was founded in 2020 with a single mission: to outpace cyber threats by securing the world's leading organisations through our constant cyber research and attack.

Today, our CREST-accredited ethical hackers work with the software engineering, DevOps and TechOps teams of dozens of brands across the world who are responsible for service delivery from over 1M websites, 100K web servers, and more than 20K education facilities.

We have clients within Online Retail, FinTech, EdTech, Mass Infrastructure Hosting, Alternative Energy/Manufacturing and B2B Managed Services Provider verticals and are rapidly challenging legacy approaches to 'snapshot' cyber testing and associated security assurance.

We are the best at what we do, and our company values and mission ensure we constantly strive to break into the world's most progressive brands. Every day.

Outpace your cyber threats

www.covertswarm.com | 0330 330 5156

If your competitive advantage relies upon continuous rates of technology change or frequent software release cycles, your cyber attack surface will be constantly changing.

'Point in time' testing is no longer enough.

Unlike the days when the rate of business technology change was glacial, your modern way of working provides malicious hackers with increasing opportunities to exploit the constantly created cyber vulnerabilities that appear within your business.

Occasional penetration tests and red team engagements are no longer sufficient to protect your software engineering and operations team output: these 'snapshot' cyber reports are out of date the moment they are published whilst your technology landscape has continued to evolve at pace.

The reliance modern businesses have upon outdated pentest and red teaming results in a 'Cyber Risk Gap' - a false sense of security that their business is secure between the traditional cyber tests they perform.

It is time to upgrade to continuous vulnerability detection and remediation enabled by CovertSwarm's Constant Cyber Attack service.

The Solution

Utilising the tools, processes and techniques employed by Advanced Persistent Threats (APTs) and simulating state-sponsored threat actors, CovertSwarm will constantly run cyber attacks against your organisation's infrastructure, people, sites and processes. Our ethical and vetted swarm focuses upon continually improving your security posture whilst keeping pace with your rapid software release cycles and ever-changing attack surface.

Unlike traditional penetration test, bug bounty programs, red teaming and simulated cyber-attack offerings – a CovertSwarm engagement has no end date, time restriction or scope limitations.

We are as relentless and covert as your real-life adversaries. We target clients' entire footprint, rather than a limited number of endpoints and assets.

We offer a flexible subscription model that is powered by CovertSwarm ethical hackers with exceptional experience and a passion for what they deliver.

We provide positive-pressure attacks against your organisation to drive a continuous and highly dynamic security load test against your estate – ranging from physical break-ins and social engineering, through to deep cyber attack deployments from our Swarm of ethical hackers.

CovertSwarm's Hive-based team structure contains a broad range of security skills gained from our engagement across numerous industry verticals. Employing these skills, our ethical hackers fixate upon repeatedly breaking into your organisation to expose your cyber risk blind spots before genuine adversaries can: closing your Cyber Risk Gap.

CovertSwarm - Constantly breaking into the world's most progressive enterprises.
Every day.

Outpace your cyber threats

— Features & Benefits

- CovertSwarm Constant Cyber Attack is the most effective way to improve your defences through our continuous research and breach attempts.
- We have cyber attack subscription tiers ranging from 25% of a month up to 'Constant Cyber Attack', with the ability to resize our human-led attacks at any time.
- We are focused on your business. We are not a consultancy with a production line of cookie-cutter projects. Our teams are constantly looking for your next 0-day and point of compromise.
- Through our Offensive Operations Centre we provide a constant set of hacker's 'eyes on'. By the time your SOC detects any breach it is already too late. Have a friendly adversary break-in first and help improve your SOC's capabilities.
- Through our powerful reporting and client engagement from our senior leadership, we provide CTOs and CSOs with a leading indicator of organisation cyber health.
- We do not add load to your lean development team's resources and pipeline. We focus on your real points of compromise, whilst removing the noise from traditional security testing approaches by supporting your prioritisation and remediation efforts.
- Remove the threat and uncertainty from expensive and typically ineffective Bug Bounty initiatives: Our team employs talented individuals who are fully vetted and employed by CovertSwarm. We do not sub-contract or crowdsource our people, meaning you benefit from their constant, expert focus on your business.
- Often code only gets reviewed by automated tools without the application of human intelligence. We add intelligence and depth via our highly distributed Hive team structure.
- Our unique approach enhances and can ultimately replace your current penetration testing, red teaming, and wider offensive security operations through our continuous security service.
- We continuously expose cyber, social and other security vulnerabilities, and work to educate and support your internal teams to reduce the impact of your dynamic risk profile whilst providing assurance to your C-suite, board, and investors.
- We do not focus on 'known' attacks and their vectors: through our research-led approach we constantly look for new vulnerabilities in client technology stacks, frameworks and environments that will lead them to their next breach.
- CovertSwarm goes significantly further than any traditional offensive security, red teaming, or penetration test service.
